

Chai Zi Yang A0262349Y EE5507 Tut 2

1. Topology Selection

- complementary pair allow for rail to rail input swing , but worse CMRR (when CM input swing such that NMOS pMOS is turning off) but cmrr notion requirement

show all the calculation done, to justify

- the current mirror reference also, not just use the formula

in report for compensation start for the RHP zero cancellation, then calculated the poles first then say it's way off, the pole is off because the approximation, then pole 1 is off because it assumed a single pole

[EE5507 Project 1 Report - Online LaTeX Editor Overleaf](#)

- migrate to here because the pic must be hi res
