

- need to click that bitch, else will give this nonsense

ERROR (VIA-1175): Cannot plot waveform signals because no waveform data is available for plotting.
One of the possible reasons can be that 'Save' check box for these signals are not selected in the Outputs Setup pane. Ensure that these check boxes are selected before you run the simulation.
ERROR (VIVA-5000): No image saved: Possible reasons could be that none of the windows or subwindows are visible or are non-empty.

this window how to do the corner, MC, all that

monte carlo stuff

Annotate DC OP

Label	Display Mode	Expression	Annotate
Terminal.cdbTerm(G)	DC Voltage		☒
Terminal.cdbTerm(S)	DC Voltage		☒
Parameter.cdbParam(1)	DC Operating Point	id	☒
Parameter.cdbParam(2)	DC Operating Point	vdsat	☒
Parameter.cdbParam(3)	DC Operating Point	vds	☒
Parameter.cdbParam(4)	DC Operating Point	gm	☒
Parameter.cdbParam(5)	DC Operating Point	rout	☒
Name.cdbName	Instance Name		☒

- Select **View->Annotations->Setup**
- Under "Cell", choose "nmos"
- Under "Display Mode", choose "DC Operating Point". Then key in rout, gm, vdsat, vds.
- These parameters will be shown on the schematic, allowing us to quickly note down the small signal parameters of the transistor and whether the transistor is in saturation region, as shown in the top right figure
- Select **View->Annotations-> DC Operating Points**

how to permanently set it

And how set plot properties

how to change the plot colour and line width permanently
